

OMAR MORILLON

DATA ANALYST · BUSINESS INTELLIGENCE · FULL-STACK DEVELOPER

Computer Systems Engineer specializing in Business Intelligence, data engineering, and process automation. I build ETL pipelines, web-based automation platforms, and executive dashboards that bridge technical and operational teams. Proven experience in demanding corporate environments (CEMEX), integrating multiple systems through SQL Server, REST APIs, and Python while cutting hours of manual work via end-to-end automation. A hybrid profile across data analysis, BI, and full-stack development.

EDUCATION

B.ENG. IN COMPUTER SYSTEMS ENGINEERING

INSTITUTO TECNOLÓGICO SUPERIOR DE SAN PEDRO DE LAS COLONIAS | 2021 – 2025

PROFESSIONAL SYSTEMS & PROJECTS ANALYST (DATA ANALYST, IMPLANT)

EXPERIENCE SOLTEK — ASSIGNED TO CEMEX | 2026 – PRESENT

- Web automation platform: designed and built an application (JavaScript, Python, HTML/CSS) that replaces the manual cross-referencing of 4 data sources used to monitor the Netradyne fleet across 20+ sites nationwide, removing several hours of operational work each week.
- Data normalization pipeline: built an engine that unifies inconsistent naming conventions across CEMEX's internal systems, ensuring data integrity when matching multiple sources.
- REST API integration: actively designing the connection between separate operational systems to create a proprietary data structure, eliminating manual Excel exports and enabling real-time data matching.
- Performance optimization: implemented asynchronous processing (Web Workers) to parse large files without blocking the interface, improving the end-user experience.

COMMERCIAL DATA ANALYST

TRAYECTO | 2025 – 2026

- Business Intelligence & Logistics: led the evolution of the BI ecosystem in Power BI (DAX, Power Query) with heat maps, budget-vs-sales analysis, and predictive models; integrated full logistics traceability (tracking trailers and tractor units per trip), validating critical data with the Systems team.
- Invoicing automation (Python): developed a script that reads XML tickets, extracts key information into Excel, packages the report as a PDF, and distributes it automatically by email.
- Full-stack CRM development: redesigned the entire architecture of the corporate web CRM: a Node.js and Python backend handling server logic and cross-system connections, with a JavaScript, HTML, and CSS frontend. Built a data pipeline linking user records to their sales history, fixing prior data loss.
- Process automation (RPA): implemented Power Automate flows to digitize repetitive operational tasks for the commercial team.
- Executive reporting: automated monthly and quarterly reports in advanced Excel to support leadership KPI reviews.

LANGUAGES

- Spanish — Native
- English — Intermediate

SKILLS

TECHNICAL SKILLS

Data & BI

- SQL Server (queries & management)
- Power BI (DAX, Power Query)
- Python (Pandas, NumPy, Matplotlib, OCR)
- ETL & data modeling

Development

- Node.js (backend / server)
- JavaScript (frontend & logic)
- REST APIs (consumption & integration)
- HTML, CSS & basic UX

Automation & Cloud

- Power Automate (RPA)
- Advanced Excel
- Google Cloud Platform
- Git & GitHub

SOFT SKILLS

- Technical communication with non-technical teams
- Cross-functional teamwork
- Problem-solving under pressure
- Analytical & strategic thinking
- Self-management & continuous learning
- Attention to detail & results-oriented

CERTIFICATIONS & ACADEMIC INVOLVEMENT

- Google Cloud Computing Foundations Certificate
- Professional Docker Course
- HackMTY 2023 participant
- HackMTY 2024 participant
